

Chemical Injection Skid “Your system needs, we engineer it on skids”

YOUR need for chemical injection:

- improve oil recovery
- remove formation damage
- well cleaning
- inhibit corrosion
- improve flow
- reduce wax formation
- biocide injection
- glycol regeneration

And many other applications, be it Upstream or Downstream.

YOUR system requires:

- correct design according to requirements, application, standard and design codes
- correct pump sizing
- correct materials selection
- proven system components
- available support throughout its life

Some reasons why you should trust Protank to deliver YOUR system:

- YOU will receive a system guaranteed to work to your requirements
- YOU will work with an experienced group of fluid handling systems specialists
- YOU will have guaranteed continuous support for the system and its components

YOU will have a system built with proven world-class components by a world-class system specialist

All the KEMDOZER™ systems are built and customized to your own specific requirements for the various applications. Thus, there is no typical KEMDOZER™ system.

PROTANK is able to engineer, design and build the KEMDOZER™ system to suit your requirements and local conditions, wherever you are.
